

# Generated Question Paper

**Q1.** The oceans contain fish stocks that can be managed as a sustainable resource to provide food for humans. [2 marks]

**Q2.** (ii) State the names of the structures labelled A and B on Fig.2. [2 marks]

**Q3.** The following are the advantages of this method: [3 marks]

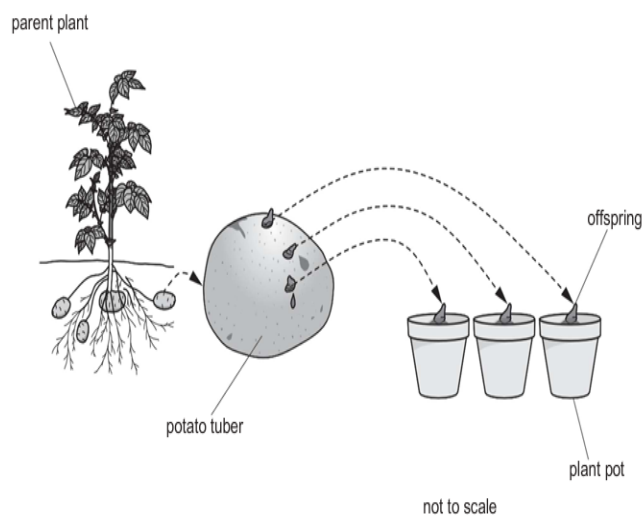

Fig. 6.2

Figure: potato\_tubers\_method.png

**Q4.** A: Blood vessel C. [2 marks]

**Q5.** (b) State the organs that make up the central nervous system. [1 marks]

**Q6.** (e) Explain the effects of nitrate ion deficiency on plant growth. [3 marks]

**Q7.** (a) State the hormone released from the testes. [1 marks]

**Q8.** The advantage of using a pyramid of energy is that it is more efficient. [2 marks]

**Q9.** (a) Describe how the structure of a neurone relates to its function. [3 marks]

**Q10.** (f) Discuss the effects of non-biodegradable plastics on terrestrial ecosystems. [5 marks]

**Q11.** Plants store starch in their leaves. [2 marks]

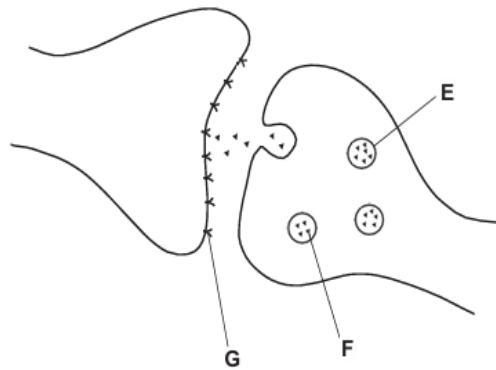

**Q12.** (iii) Ancestors of monkey flower plants had a much smaller leaf area. Explain how the monkey flower plants have developed a larger leaf area over time. [5 marks]

**Q13.** Fishing is a way to conserve fish stocks. [2 marks]

**Q14.** The retina is a part of the retina. What is the retina's function? [3 marks]

**Q15.** (d) Explain why reflexes occur in unconscious people. [1 marks]

**Q16.** (e) shows a synapse and parts of two neurons. (e) begins center end center (i) Draw an arrow to show the direction of the signal across the synapse. [1 marks]

**Fig. 4.1**

*Figure: synapse\_diagram.png*

**Q17.** A sperm cell is a cell that divides into two individual cells. A sperm cell is a cell that divides into two individual cells. A sperm cell is a cell that divides into two individual cells. [3 marks]

Fig. 5.3

Figure: sperm\_cell\_micrograph.png

**Q18.** (f) Describe the process by which a fertilised egg cell is fertilised. [3 marks]

**Q19.** The right ventricle is located at the center of the heart. [1 marks]

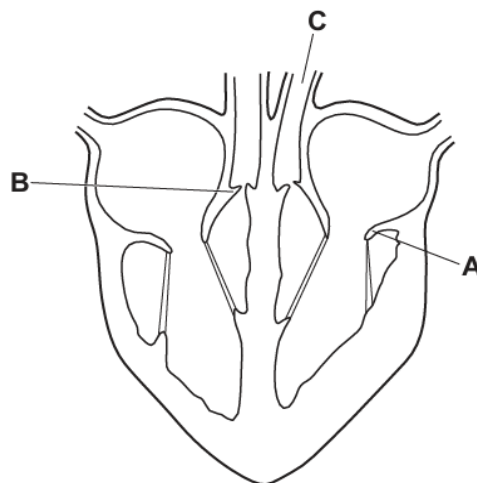

Fig. 2.1

Figure: Fig2\_1\_HeartCrossSection.png

**Q20.** Plants growing in Europe begin center begin tabular cc top rule Plant Number & Leaf Area (cm<sup>2</sup>)  
midrule 1 & 310 2 & 335 3 & 390 4 & 348 5 & 365 midrule Mean & 350 bottomrule endtabular endcenter (i)  
Using the data in Table 5.2, calculate the mean leaf area for plants growing in North America. Give your answer as a whole number and include the unit. [2 marks]

**Q21.** The effect of pH on lipase activity is shown on Fig.1. [6 marks]

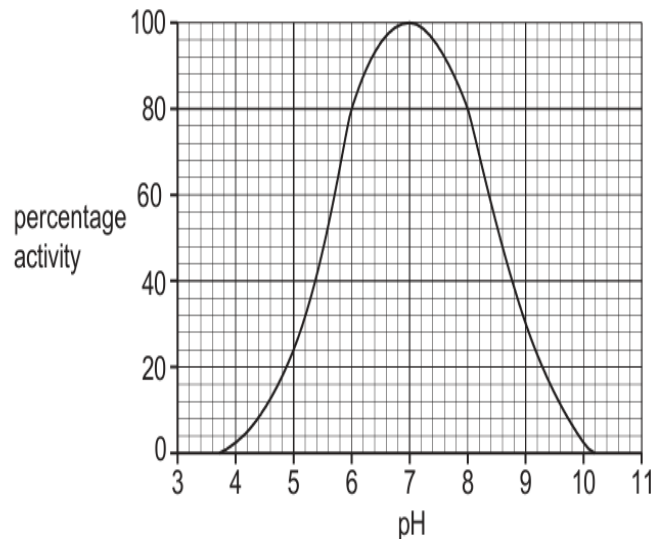

Figure: Fig1\_1\_LipaseActivity.png

**Q22.** (d) Name two products of biotechnology, other than bread, that make use of microorganisms. [2 marks]

**Q23.** noindent \_\_\_\_\_ (ii) State a conclusion for the results shown in Table ..... [1 marks]

**Q24.** Scientists had higher breathing rates in the 550 ppm CO<sub>2</sub> plot. [2 marks]

**Q25.** (ii) State one recommendation, other than regular brushing, for proper care of teeth. [1 marks]

**Q26.** The average photosynthesis rate of soybean plants was measured in two plots with different CO<sub>2</sub> concentrations, 370 ppm and 550 ppm. Describe and explain the effect of carbon dioxide concentration on the average rates of photosynthesis of the soybean plants from 04:00 to 22:00. [6 marks]

The atmospheric carbon dioxide concentrations in the two plots were kept at:

- 370 ppm, which is similar to the current atmospheric carbon dioxide concentration
- 550 ppm, which is a possible future atmospheric carbon dioxide concentration.

When the soybean plants were fully grown, scientists calculated the average rates of photosynthesis at regular intervals from 04:00 to 22:00 for both plots.

The results are shown in Fig. 2.1.

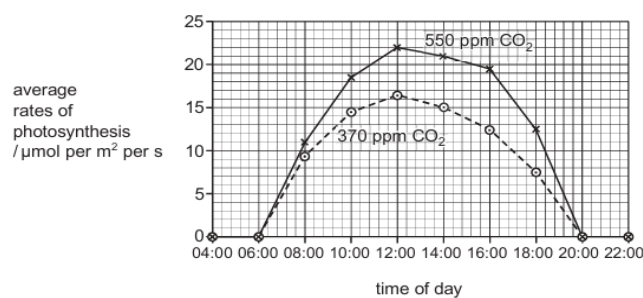

Fig. 2.1

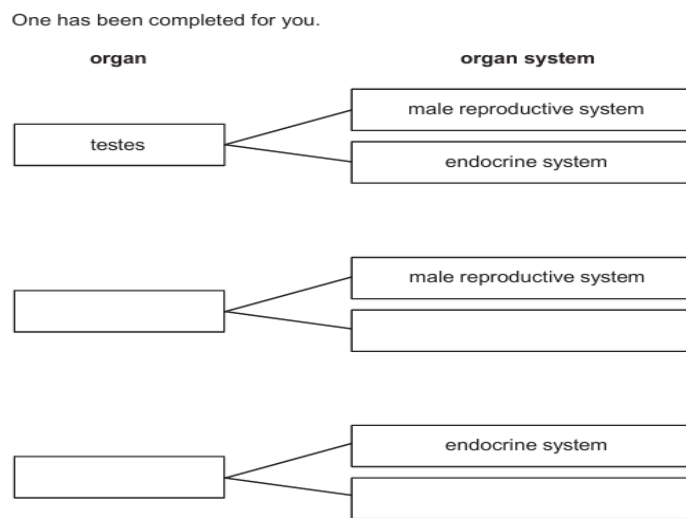

Figure: photosynthesis\_rate\_graph.png

**Q27.** (b) Lugworms live in sand on beaches and feed on diatoms, which require ammonium ions. Researchers tested effects of microplastics on lugworms; see Table 3.1. Describe and explain why researchers concluded that non-biodegradable microplastics are most harmful to lugworms using Table 3.1. [4 marks]

**Q28.** Enzymes are catalysts. (a) (i) Describe what is meant by the term catalyst. [2 marks]

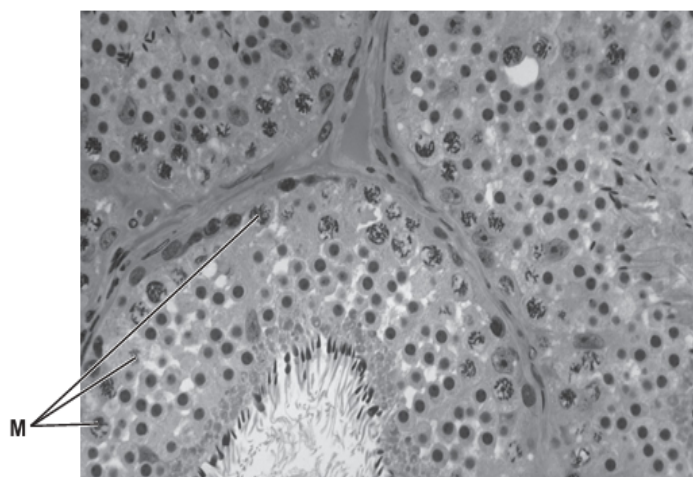

**Q29.** The nitrogen cycle is a process that occurs in the nitrogen cycle. [1 marks]

**Q30.** The testes are a part of the human body. Meiosis is the process of dividing the testes into two parts. [3 marks]

**Fig. 5.1**

Figure: organs\_two\_systems.png

**Fig. 5.2**

Figure: mammalian\_testis\_micrograph.png

**Q31.** The term 'species' is a term used to describe a species. [2 marks]

**Fig. 6.1**

*Figure: potato\_varieties.png*

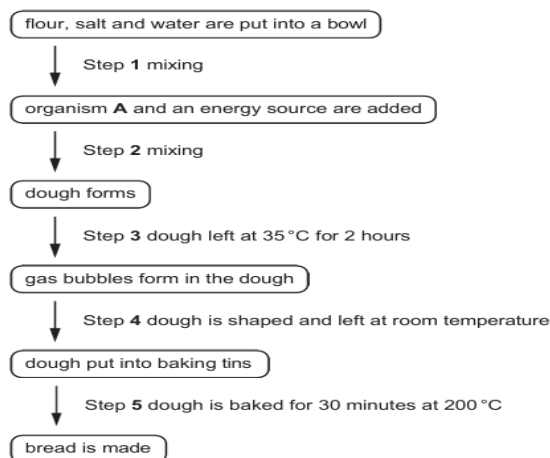

**Q32.** (b) (i) Name the source of energy used by organism A. [1 marks]

**Q33.** (a) (i) It is estimated that microplastics make up 5 [3 marks]

**Q34.** The name of organism A is a comma. [1 marks]

Biotechnology is used in the process of bread-making.

Fig. 1.1 shows some of the steps in making bread.

**Fig. 1.1**

*Figure: bread\_making\_steps.png*

**Q35.** (iii) Name the gas that forms to create the gas bubbles in the dough. [1 marks]

**Q36.** The temperature of the atoms in the nucleus of the atoms is the same as the temperature of the nucleus of the atom. [2 marks]

**Q37.** (ii) Name the process that causes gas bubbles to form in the dough. [1 marks]

**Q38.** (ii) Enzymes are the chemical elements found in all proteins. [2 marks]

**Q39.** (c) Complete Table 2.1 by stating two structural features of epidermis and mesophyll tissues and explain how each feature is an adaptation for photosynthesis. [4 marks]

**Q40.** The process of converting ammonium ions into nitrate ions is called the nitrate reaction. [1 marks]

**Q41.** The a) The possible causes of increased atmospheric carbon dioxide. [3 marks]
